<https://www.linkedin.com/in/reillysteere/>

Full Stack Developer with eleven years' experience working in an agile environment on a variety of technologies and platforms, emphasizing interaction design and a customer-first approach.

### Relevant Background

- Significant experience with React/AngularJS/JavaScript/TypeScript/jQuery
- Significant experience with NodeJS / Ruby on Rails
- Significant experience architecting / planning and implementing React apps in a way that deliver on high developer experience, while also easily scaling to meet evolving business requirements
- Introduced Cypress as a first-class tool for our front-end team to form the foundation of our automated testing strategy, comfortable with both component and e2e tests
- Significant experience implementing jest unit and integration testing on both new and legacy domains, leveraging libraries such as RTL and MSW
- Experienced porting legacy apps from a wide variety of technologies into a high-performing React ecosystem (AngularJS / Vanilla / jQuery ->> React / React-Query / Redux / Zustand) in systems under active use

### Professional Experience

#### Getty Images – Senior Software Engineer (2020 – Present)

Proven leader within the organization with a demonstrated track record on delivering against aggressive deadlines on highly complex product areas by leveraging a high degree of technical expertise, coaching experience and ability to work collaboratively with cross-functional stakeholders.

- Technical Architect / Project Manager for migration from Rails / AngularJS to Node / React for all pages responsible for handling payment methods on an e-commerce platform processing between 1 and 3 million in revenue per day

- Led front-end team of 10 developers delivering the largest new feature roll-out the company has undertaken (AI Generative Imagery)
- Provided mentorship and direct coaching to developers at multiple levels of development
- Contributed to significant improvements in core web vital metrics
- Responsible for ensuring site reliability is maintained through Splunk / Grafana
- Implemented team's first automated test suite via Cypress and responsible for ongoing development on this project
- Technical Lead on multiple production tracks
- Developed strong collaborative relationships with other teams (design, product management) to accelerate aggressive timelines

#### **H&R Block Canada – Software Developer (2017 – 2020)**

Transferred from the User Experience team to join the Software Development group in a full-time capacity as the role was better aligned with my skillset. In this capacity my work has centered around the implementation of newer features / monetization channels and developing flexible architecture to support evolving business requirements.

- Delivered first internal react application to prototype stage
- Completed Migration of Enterprise software from Grunt Taskrunners to Webpack / Babel configuration, allowing full integration of modern ESLINT / ECMA2015+ standards as part of a long-term migration plan (AngularJS to React/Redux, Angular)
- Manage task prioritization within highly distributed team, including offshore resources
- Active contributor to all parts of agile development process
